## AVENGERS CAMPAIGN FRANCHISES

### Avengers Branch Teams

For years, the Avengers operated relatively autonomously, as did the Fantastic Four and other superhuman teams. As the complexities of crime fighting expanded and the activities of the Avengers expanded to meet them, the team's needs changed. Their ties with local law enforcement forces and the United States government developed into having direct access to U.S. governmental and military information networks. The Avengers' special compensations (such as domestic use of super-sonic aircraft like their Quintets) were contingent on working with the U.S. National Security Council.

After a number of years of tumultuous relations with the U.S. government, especially their NSC liaison Henry Peter Gyrich, the Avengers' ties with the US government were severed and their charter was revoked. After a chaotic battle with the Tetrarchs of Entropy and a subsequent two-day meeting of the Avengers' full membership, the team's charter was re-established under the United Nations.

Immediately following the public announcement of the Avengers' new association with the United Nations, the world looked upon the Avengers as yet another toy in the political arena. The UN itself, however, has not interfered or made any overt demands on the team in terms of their membership and organization. This fact could be attributed to Captain America's years of experience with bureaucracy and military organizations or perhaps it was simply because the Avengers were often off on missions of world-wide importance.

That is not to say that there has not been extensive lobbying on the part of many member nations and individual interest groups for securing membership of certain representative superhumans into the Avengers. Seen as a mark of elite status and prominence both for the

hero/heroine and the sponsoring nation, avengers membership for national heroes has become the latest political power chip involved in United Nations negotiations. Some member nations, such as the representatives of the former Soviet Republics and their Peoples' Protectorate, have lobbied for whole teams of powered beings to be admitted as affiliated Avengers' branch teams.

The most prominent proposal nearing a vote is the General Assembly's desired establishment of an Avengers' branch team for the purpose of policing areas outside of the American continent. This proposal has been welcomed by all member nations except the United States, but has never come close to resolution simply because of national disagreements over membership proposals and the location of a base of operations. Table A shows all the superheroes and base locations proposed by member nations. How these politically-loaded nominations affect the Avengers in your game world is known only to the Judge and Uatu.

### Table A: UN Proposed Avengers Bases and New Members

Australia: Sydney; Talisman I  
China: Moscow; Collective Man  
Egypt: Cairo; Scarlet Scarab  
France: Paris; Peregrine  
Germany: Berlin; Blitzkrieg, Hauptmann

Wakanda: Wakanda; no nominations for members

## The New Avengers

In every MARVEL SUPER HEROES game world and even in all the alternate worlds explored by Uatu the Watcher, the Avengers are the ultimate guardians of justice and stand as symbols of all that is good and right in the superhuman population expansion of the late 20<sup>th</sup> century. And now, players and Judges alike have the chance to make their own legends alongside those of Thor, Iron Man, the Vision, and the rest of the Avengers. Your campaign heroes and heroines have been chosen for membership in the Avengers!

## Security and Background Checks

All new members of the Avengers undergo a complex security screening process to determine their suitability as members of the Avengers. The most important check determines their suitability for access to secret information. Every member undergoes these checks before being issued an Avengers Identocard or Communicard.

A specialized computer system in the Avengers command center handles the entire background check process. This system, designed by Tony Stark (someone who understands the need for secrecy), makes its information checks via a unique random sequence code that initiates information checks through the data banks of the FBI, the CIA, Interpol, the U.S. and the United Nations National Security Councils, and AMEX. The checks are disguised by encoding, identifying them as standard background checks for prospective employees of the U.S. Department of Agriculture. Areas of focus for the program include checks on family status, past criminal behavior, psychiatric treatment, substance abuse, and participation in anti-American (recently changed to "anarchist") groups. The system also looks into any outstanding debts and current credit ratings and evaluates any existing

educational records.

Any information input by the operator/new Avenger, most specifically the hero's or heroine's civilian identity and address, is permanently erased from Avengers computer files after the search is complete. Safeguards like this are essential for members who choose to keep their identities secret. After the process is completed, operators are notified whether they have passed the security qualifications. If player characters pass the security checks, they move up to full-time Avengers status!

## Benefits of Membership

Heroes in the MARVEL UNIVERSE have long known the advantages of allying themselves with others against common foes. This is the most basic of benefits when a player character joins the Avengers. In addition, neophyte heroes gain access to the knowledge of more experienced teammates. It's best to learn things first hand, but fighting the Absorbing Man without any preparatory knowledge is not recommended if anyone can help it!

Aside from these basic privileges, being an Avengers branch team grants player characters special United Nations status, a state-of-the-art headquarters, and use of Avengers technology. Tony Stark, Reed Richards, and King T'Challa of Wakanda provide all Avengers with cutting-edge vehicles, weaponry, and more.

## United Nations Status

All members of the Avengers have a special status as a peace-keeping agent of the United Nations. They have the authority to operate as deputized law enforcement officials in any country of Earth with the express permission of that nation's government. United Nations member nations can choose to reject the aid of the Avengers, but currently, the only nation to reject the Avengers has been Demonica.

This special United Nations status also provides a limited diplomatic immunity for heroes operating in Avengers capacity. This most often applies to violations of aircraft regulations, the use of superhuman force in the arrest and capture of criminals, and the usual results of any battles such as property damage and personal injury of combatants and bystanders.

Avengers can command assistance from local authorities on an emergency basis, and Avengers priority provides them support from any government or public employee. These powers best serve the heroes in the course of major mayhem, allowing them to take command of on-site forces and handle the source of the problem while local officials handle crowd control.

United Nations status grants an Avenger a high-level security clearance for access to high-security government buildings, data, classified information, and government officials. Liaison officers are currently established between the Avengers and a number of governments and world-wide power groups such as the FBI (Agent Derek Freeman), Interpol (no contact yet established), S.H.I.E.L.D. (Nicholas Fury), United Nations (Devi Bannerjee), United States (Raymond Sikorsky, NSC; Presidential access by Chairbeing only), and Wakanda (King T'Challa).

## Technology

The Avengers count some of the greatest minds alive in the world today as members and thus the team has instant access to the latest technologies developed on Earth or elsewhere! Much of their technology is located in their headquarters. Every branch is provided with its own base. For information about branch team headquarters construction, see Appendix One of this book. Details of the New York HQ are shown on a poster map included in this box.

Most other technologies developed by or for the Avengers, aside from their vehicles, costumes, clothing, and communicators, is undertaken on a case-by-case basis and is not generally available except when absolutely needed. The following is a list of currently accessible Avengers technology and includes all appropriate information. Game statistics for vehicles are provided on Table B: Avengers Vehicles.

*Air Car Mk I:* Designed by the Black Knight in conjunction with Wakandan design groups, this open-top Air Car has a snub nosed body, and flies by means of five jets. One primary engine is mounted in the rear and four booster jets are on external side mountings. At 18 feet long and 12.5 feet wide with side mounted jets, this Air Car has seating for four adult-size humans. This Air Car was designed for inner city and local transport to avoid problems with the use of supersonic Quinjets within New York City. The Air Car is equipped with

Amazing range sensors and communications systems, but it is not furnished with weapons systems. *Material Strength:* The Air Car is constructed of Excellent rank, lightweight steel alloys. The open top affords passengers only Good rank protection from attacks. *Availability:* Though the first model was destroyed recently by the Swordsman, there are currently two of these available at Avengers Headquarters in the hangar. The plans are in the computer networks and are available to all Avengers teams.

*Air Car Mk II:* This subsequent Air Car design, also by the Black Knight, is more aerodynamically streamlined. Its main body measuring 14.9 feet by 8 feet. Three jet assemblies are all rear mounted for more thrust and maneuverability. They are capable of generating the equivalent thrust of a Quinjet for up to 10 minutes at a time, but its open-air construction makes this hazardous to occupants. Like its

predecessor, the second generation Air Car is equipped with Amazing range sensors and communications systems but no weapons systems. *Material Strength:* The Air Car Mk II is constructed of Excellent rank, lightweight steel alloys. The open top affords passengers only Good rank protection from attacks. *Availability:* The first operable model of the Mk II was sabotaged and crashed in midtown New York. It was totally destroyed by Raza's attempted assassination of the Black Knight. There have since been two models constructed and on hand in the New York headquarters.

*Avengers Jacket:* Made of a synthetic material with the appearance of leather, these jackets are now a standard accessory for many Avengers. Despite their simple appearance and casual wear, these jackets hold more than expected.

- *Body Armor:* The material, thinner and more supple than Kevlar, is nearly bullet-proof and provides Good protection vs. physical attacks and Typical protection vs. energy attacks.
- *Tracking Beacon:* The red "A" shoulder patch on the jackets contains circuitry for an Amazing range beacon that can be traced from any Avengers base to locate team members.
- *Temperature Resistance:* The material has a microcircuitry weave that generates heat or cold, affording the wearer Good rank protection from such temperature attacks or climes.

*Material Strength:* The jackets are made of Excellent strength material. *Availability:* Jackets can be tailor-made for any member of the Avengers.

**Bio-Analyzer:** Standard equipment for any headquarters, this machine (in hand-held models or a wide-range sensor array) performs the following:

- **Detection:** The bio-analyzer can detect the presence of mutants, shape-changers, and aliens of any race known to the Avengers with Incredible ability and range (11 areas).

**Material Strength:** Hand-held units are made of Excellent strength materials. Larger, built-in sensor arrays are the same material strength as the wall installation (minimum of Excellent).

**Availability:** One Bio-analyzer is kept on hand in both the Avengers L.A. compound and the New York HQ.

**Communicard:** Every Avenger carries a Communicard, an Avengers ID card with microcircuitry that allows:

- **Communications:** Avengers can communicate visually through a small screen on their cards. The screen normally shows a photo of the Avenger who carries it. The card beeps like a pager when called. The range for communications is 5,000 miles (Class 1000 range), though signals can be boosted by central communications at Avengers HQ for a range of 1,000,000 miles (Class 5000).
- **Computer Terminal:** A keypad allows numerical code access to any Avengers computers within range.
- **HQ Access:** The cards are magnetically encoded to open all entrances at any Avengers bases.
- **Resource Card:** The card also acts as a bank card for access to a special Avengers contingency account.

**Material Strength:** Cards are constructed of Remarkable strength material and are fully waterproofed.

**Availability:** All Active and Reserve members have cards. Inactive Reservists have cards on a limited basis, based on their reliability to the team and their locations.

**Quinjet:** The Quinjet is the standard mode of transportation for the Avengers. On-board systems include:

- **Auto-Pilot:** The on-board computer can maintain Typical control, though it cannot take off or land the Quinjet.
  - **Communications:** The Quinjets hold Monstrous rank and range radios and other communications devices. All incoming and outgoing signals can be scrambled with Monstrous efficiency for security. Quinjets can link with all standard and covert air frequencies.
  - **Modifications:** Quinjets can also be modified for a variety of situations, such as space or submersible travel. Quinjet statistics are on Table B.
  - **Security:** Quinjets are only operated by someone with an Active Avengers Communicard. They can also be voice-activated by Active Avengers for quick starts. Otherwise, Quinjet hatches and the canopy remain magnetically sealed.
  - **Stealth:** Quinjets can become radar-invisible with Incredible ability.
- Material Strength:** Quinjets are normally made of Excellent strength materials.
- Availability:** Each team has two operating Quinjets at any given time. Parts are always available for the construction of another, or to repair

a damaged Quinjet. These jets are made by Stark Industries, but only a Chairbeing or the Chief Executive is authorized to order these for a team.

**Skycycle:** Originally constructed for Hawkeye, the skycycle has become standard equipment for Avengers on solo missions. Its size makes it more useful for clandestine missions since it is more easily hidden and harder to track than a large Quinjet. Just like the Quinjets, Communicards are used to operate the skycycles. The cards are actually used as ignition keys, though there is no voice activation of the skycycle, only manual control. Two skycycles can be transported by a Quinjet if the seats are removed to expand cargo space. Skycycles have Amazing rank and range sensors and radio systems.

**Material Strength:** Skycycles are made of Excellent strength materials, though they give only Good protection to their passengers.

**Availability:** Skycycles are now built by Stark Industries after they purchased the design from Jorge Latham. They are provided in pairs for the Avengers. There are four skycycles at the New York and the L.A. bases, with parts on hand for repairs.

**Table B: Avengers Vehicles**

Vehicle	Price	Body	Control	Air Speed	Max. # of Passengers
Air Car Mk I	AM	EX(GD)	RM	AM	4
Air Car Mk II	AM	EX(GD)	IN	MN	6
Quinjet, standard	AM	EX	RM	Shift Y	7
Quinjet, submersible	MN	IN	RM	EX(Underwater)	7
Quinjet, space-worthy	MN	AM	IN	Shift Z(Space)	7
Skycycle	RM	EX(GD)	EX	IN	2

All the above vehicles are equipped with VTOL and hover capabilities.

### Inter-Team Coordination

Though each branch team of the Avengers has autonomy within the boundaries of their appointed protectorate, no team is considered superior to any other Avengers team. In essence, with the recent changes to the Charter, the Avengers are all one team.

With the Avengers as one unified force, each Avengers team can call on other team members whose specific talents might help. Call Hank Pym when you need a biochemist, or talk to Iron Man or the Black Panther when trying to comprehend the workings of some alien device. Always keep in mind that player characters in need of aid can call on their fellow Avengers in times of need. That's what they're for!

Player character teams will have to appoint their own reserve substitutes once their Avengers status is cleared. Any empty reserve or active slots in the membership can be appointed by the Chief Executive. During the initial establishment of a new branch, it might be useful for the player characters to be able to learn from a veteran. The Chief Executive (the Judge, of course) can assign any Reservist to detached duty with the new team for a preliminary period until such time that they are Avengers in every sense of the word!

Good luck, players and Judges. Your characters are joining the ranks of the world's mightiest heroes. Be prepared for nothing but great action and adventure in your Avengers game campaigns! Are you prepared to enter the MARVEL UNIVERSE and protect New York from the Masters of Evil? Then turn the page and be ready for the cry of "AVENGERS ASSEMBLE!"

## ADVENTURES

There is always a need and a time for heroes, regardless of their location, the color of their costumes, or the notoriety of their exploits. And that time has now arrived for the heroes of any Judge's campaign. These adventures are written to establish a team of player character heroes as members of the Avengers. Players and the Judge alike can experience a new Avengers legend in the making. If you use established Marvel heroes in your games, you can still play these adventures and save the world from disaster. Prepare your characters for the clarion cry of "Avengers Assemble!"

### Adventure Opportunities

The Judge is presented with both Campaign Timelines and an Adventure Timeline spanning a number of months' or days' events that happen on maps provided in this sourcebox or in the MARVEL SUPER HEROES Basic Set. In fact, the street map located in this sourcebox fits together with Basic Set map (match the upper left corner to the lower right corner of the Basic map to fit).

The timelines allow the Judge and players to see a whole months' or a whole days' events and adventure possibilities at once, not just the scope of the current plot. All the clues and events of at least two adventures are in place, and it's simply up to the heroes to be in the right place at the right time (as well as deduce what all the events truly mean) for them to participate.

Within this sourcebox, there are also two major Adventure Plotlines designed to directly involve the heroes, and two minor Adventure Plotlines that the heroes can uncover as well. The major points are fully delineated in terms of scope and ramifications. The Judge effectively has a copy of the villain's handbooks and plans. Potential Karma awards are listed for both sides, yes, villains can actually gain their negative Karma points within the scope of

these campaign adventures. Tactics for combat and some role-playing encounters are also included for the villains. The villains are at last prepared for the Avengers, so watch out, heroes! The minor plots are generally presented as one to two event scenarios, and can be handled by smaller groups of heroes or even solo heroes.

The MARVEL SUPER HEROES Game sourceboxes are tailored for the focal characters to be used in some fashion. Just as MHR2, WEBS: The SPIDER-MAN Dossier, and its adventures, were plotted for Spider-Man or another lone hero, the adventures in this sourcebox are established for heroes who call themselves Avengers. Even though the major scenarios are designed for a team of five to seven heroes, there are always adventures here for the lone hero or a pair of heroes.

Characters established for use in the adventures are presented in the next chapter, "Avengers' Assemblage." Ninety heroes and villains collected for the express purpose of establishing the greatest battles of the Avengers on the Judge's and players' game world. Not all the characters may be used in the timelines, but they are given to establish other adventure hooks and plotlines using the Avengers.

### Campaign Timelines

Judges are provided with expanded campaign timelines that cover a number of major events that occur after (or before) the adventures. These timelines allow Judges and players to use their sourceboxes for extended periods of game play. Campaign timelines can also provide minor links with all MARVEL SUPER HEROES game sourceboxes, letting Judges use recurring characters and plots to provide a greater sense of game world continuity and campaign structure. The Marvel Universe comes alive on your gaming table!

### Adventure Timelines

Here's where it all happens. Any and all major events are listed chronologically in the Adventure Timeline and it's up to the heroes to be ready for them. The Judge should read through each day thoroughly and decide how many or how few actions will definitely be happening and prepare to have a number of things active at once. If the heroes are fighting the U-Foes on Regency Street, that won't stop a plane from crashing in the center of the city. It means they have to decide which actions come first and how best to serve the public.

Each day listed on the timeline is divided into four sections: Setting, Heroes, Villains, and Action. All the sections are interwoven with various plots, but each has specific goals and actions that occur regardless of any other happenings. For example, Roger Blake has to rob the 1st National Bank on Tuesday at 2:00 p.m. Unfortunately for him, Spider Woman has an appointment with an investment banker at that time and stands a good chance of fouling his robbery attempt.

**Setting:** This section describes minor or inactive changes to the surroundings and minor bits of action. Unlike the Action section, all of the setting notes and events are not dangerous in and of themselves. They simply offer more background details. For instance, if there was a battle on Jefferson Street on Tuesday, there should still be some damage on Wednesday (even if Damage Control was called in!). This section also has notes on minor physical changes to the city such as Building A set for demolition, road crews at work at these areas (closed to normal traffic, etc.), or noting the times when traffic copters are flying over the areas. Setting notes also describe weather and its physical effects on the city and the heroes.

**Heroes:** These incidents present action possibilities for the player characters to investigate at any given time. Many of them are mandatory and Karma penalties are the result of missing any necessary actions. At least one action given per day will have ties to the major plot or plots. Often, there will also be mention of other NPC heroes and their actions (allies aren't hard to find).

**Villains:** These menacing scenarios are all planned by their respective participants but many are often tentative. There is no stealing armored cars escorted by Thor unless you have the power to deal with him. All the villains have the potential for much chaos and destruction and that's what the heroes must stop. Only the primary plot clues and actions are always going to happen.

**Action:** These are all the other random events that take place every day in the city, or whatever setting the Judge has chosen, from car accidents to power outages to monsters rampaging through town. These actions will add the realism of a world existing outside the plotlines and give the Judge a wider variety of scenarios and situations to work into his or her immediate adventure.

#### **Avengers Assemble!**

For these game scenarios, the Judge should have the campaign's pre-existing heroes recruited by the Avengers as Reserve members. In the Judge's game world, the Avengers and the United Nations have made a concerted effort to pool all superhuman resources as much as possible under the Avengers. This makes it easier to mobilize the forces necessary to repel another Atlantean invasion, or to halt the encroachment of alien forces onto Earth. If players are, therefore, using their own characters, move on to That's The Why It Is... and

begin your own adventures as Avengers.

If the Judge's game is currently using established Marvel heroes, the world is in a crisis. All of the active members of the Avengers teams are missing, as are many of the established Reservists. If players are using any of these characters, the Judge must explain that they have disappeared into thin air, some in front of hundreds of witnesses! Any non-Avengers can join in this emergency situation, but only four previous members of the Avengers are reachable on Earth when the call to assemble goes out. Unless other heroes answer the call, the six heroes assembled as Avengers are Ant-Man, Dr. Pym (leader), Firebird, Giant Man, Hellcat, and the Wasp. For seven or eight heroes, add Rage and Red Wolf to the team. Once this team, or some variant of it (at least one member must be from the above list), is established, move on to the next section.

#### **That's The Way It Is...**

Over the past few days, some mysterious force has been plucking Avengers out of thin air and abducting them to parts unknown. The Avengers' ranks are gutted and they are the only heroes to answer the call.

As Earth's primacy defenders, it will be the job of the player character Avengers to respond to threats to world security as demanded by the United Nations and by necessity. Despite the locations of the varied heroes, the call to assemble brought them all to the Avengers' central headquarters in New York City. Locations within the continental United States can be reached within two hours by Quinjet, though the majority of the action occurs within minutes of Avengers HQ. Temporary Quarters will be established for members in New York if needed, and the team will constantly be on call. Dr. Pym will be spending time to locate the missing team members, but his efforts will be fruitless until the heroes are returned by the Grandmaster.

Any pre-existing storylines and plots within a Judge's game campaign should be interwoven into the heroes' required actions on the timelines. Though the heroes have been called in to serve as the primary Avengers team, their normal lives do not stop and any sub-plots and situations of potential Karma gain or loss (such as meeting one's girlfriend or doting aunt for dinner or fulfilling a charity appearance) must be addressed. The heroes' lives have not changed except that they now have the added responsibilities of being Avengers.

Campaign Timeline I provides Judges with basic setup information for many characters in the New York City of the Marvel Universe. The information can also be planted into newspapers and other media to be given to the player characters when the adventures officially start (Adventure Timelines date of December 27). After following the

Adventure Timeline, Campaign Timeline II covers a four-month timespan, giving follow-up information on the adventures as well as news to use as hooks for future adventures.

It is strongly suggested that the Judge read through all the material in this adventure section before actually playing. There are many activities occurring at once, and the better acquainted the Judge is with the material, the smoother the game will run. Good luck. Avengers!

#### **Avengers M.I.A.**

For the Judge's information, the missing Avengers have gone somewhere and with a purpose, though not one of their own choosing. The Grandmaster has accepted a challenge from one of the Avengers' greatest foes, Loki! The game is to settle a wager of the Judge's choice. The two villains chose the Avengers as suitable agents to play their game. Unfortunately, the varied members of the Avengers have fit the bill as pawns in the game. The Avengers are placed on a generic world with the express purpose of fighting their comrades. If they refuse to cooperate, the natives of that world will be slaughtered. The heroes are to collect the components for some universal device (of the Judge's making) that is the prize for either Loki or the Grandmaster. When the game is completed, the heroes will be returned to Earth after one week of game time (or another length of time as determined by the Judge), their memories of the contest erased. If the players wish to play out these scenarios, the Judge can use all of the 40 missing heroes in planetary missions of his or her own design. The missions should involve the search for the five pieces of the cosmic gadget to construct and also involve fighting their comrades. These tournaments are meant more to test the mettle of the pawns. The game is what's important, not the result. Good gaming!

#### **Clues**

Within the timeline, there are a number of instances where heroes can stumble across small pieces of a plot and, with a little detective work, uncover the plans of the villains. With all the happenings on the timelines, there isn't enough room to provide individual clues for each potential.

The following are some of the villains involved in the primary adventure plots, complete with general clues that might provide hints for the player character Avengers. The clues mentioned are often side-effects of power use, and go beyond the standard destruction left in the wake of any supervillain. If no clue is listed for a specific villain, player characters must rely on eyewitness identification of the villains. Directly following the clues section are a number of combat tactics usable for many villains or heroes.

**Beetle:** The Beetle can be tracked via his microwave power generator. It disrupts radio and television signals as well as certain other frequencies.

**Grey Gargoyle:** Duval has picked up an absent-minded habit of flipping coins when he is nervous. Given the nature of his power, look for out-of-the-ordinary stone items like quarters or small objects like balls that have been turned to stone.

**Klaw:** Klaw, being composed of solid sound, unconsciously emits high frequency sound waves beyond the range of human hearing when he moves. Clues left behind by Klaw include cracked windows and fragile items, irritated and barking dogs and other animals who can hear his sonic emissions, or faulty non-visual security sensors. If sonics are used to detect movement by sensors, Klaw may confuse the machine and interfere with its proper functioning.

**Moonstone:** Background traces of a unique radiation can be found within two hours of her leaving an area if using Remarkable rank or better radiation sensors. If sensors are used to track, they can follow Moonstone unless she is in the company of Chen Lu (see Radioactive Man). The largest concentration of Moonstone's radiation is found in the Blue Area of the Moon.

**Quicksand:** When Quicksand walks, she easily scrapes polished floors and often leaves a tiny amount of residual sand behind. Paint may be stripped off objects from the use of her sand powers.

**Radioactive Man:** Chen Lu constantly emits low level radiation that is kept in check by his energy harness. Currently, the harness is in need of repair and is losing small amounts of the Cadmium fibers woven into it that can be found. The fibers, in addition to the traces of spectrum radiation found on site, serve to show the presence of the Radioactive Man for up to 12 hours after his passing.

**Super-Adaptoid:** The only flaw in the Super-Adaptoid's new Captain Marvel configuration is that he wears the Nega-Bands on his wrists, despite their theft and destruction by the Shi'ar. If confronted with this, the Adaptoid must make a Yellow Reason FEAT roll to provide an explanation (bracelets that provide him with the energy that animates him now or another of the Judge's choice) or else he'll drop his cover and attack his foes, looking to incapacitate, not to kill.

**Whirlwind:** His most obvious clue is the pattern of destruction. Debris tends to be swirled into circular formations from his spinning and his cyclone winds. Also, his miniature buzz-saw blades can be found embedded in wrecked walls if he encountered resistance.

### Teamwork and Combat Tactics

The following are basic tactics used by the villains (and heroes) as a team, an aspect of fighting often forgotten. The tactics look at double-teaming opponents, mass destruction, pre-planned escapes, and breaking and entering.

#### Double-teaming

- Fastball specials work when a strong character throws another hand-to-hand fighter at his target (Goliath throwing Tiger Shark or Titania throwing the Grey Gargoyle).
- Cover ground-based heroes, with two or more fliers, with distance weapons, catching (tem in multiple crossfires (Moonstone and Laser blasting at heroes simultaneously or blasting an airborne figure from both skies).

#### Mass Destruction

- An airdrop of invulnerable allies wreaks maximum destruction (Beetle airdrops Goliath at human size and he grows as he drops for a wider impact radius).
- Shock waves radiating from two opposing powerful forces (Goliath's clap, Absorbing Man's ball vs. Thor's hammer, etc.).

#### Escape Tactic

- Blinding opponents for a round or two to escape (Living Laser or Sunstroke blinds everyone while villains split off in different directions).

#### Breaking and Entering

- Utilizing Avengers HQ skylight, Radioactive Man releases a potent radiation pulse to temporarily scramble scanners and sensors. Living Laser and Moonstone blast openings in the roof and phase through the skylight, hitting all security weapons at light speed. Once in place, they seal the metal doors with lasers.

## Campaign Timeline I

### October

- (October 6, pm) The Symkarian Jewels exhibit at the Symkarian Embassy is disrupted by various super villains such as the Scorpion and Man Mountain Marko (see MHR2: WEBS for details).
- (October 19, all) A freak snowstorm strikes the city and reports of "abominable snowmen" in Central Park flood the local media. A dimensional rift to Niffleheim opened in the park and a previously unknown tribe of 13 man-sized hairy creatures wandered out. If encountered, they are generally docile, but one clutch of four creatures are savage. They are two mothers and their mates protecting their three infants.

### November

- (November 2) The Avengers West are contacted by both the X-Men and local law enforcement officials regarding a dangerous mutant in Seattle, Washington with power readings that go off the scale. He has been looting local banks and is always attended by darkness. This man has Shift X Sound and Light Absorption powers. These powers give him uncontrolled size changes and strength as well as Darkness powers and an Invulnerability to sonic and light-based attacks. The media has dubbed him the new Blackout.
- (November 11-13) At least four Avengers of either team are called in to protect the British, French, and Wakandan Prime Ministers at a diplomatic conference in Paris. The death threats of both ULTIMATUM and Fenris have all parties worried. The Black Panther is also at this conference with his Prime Minister,

and can aid the Avengers against the joint attack of the Flag-Smasher, ha ULTIMATUM goons, and Fenris.

- (November 27, pm) The first major snowstorm of the season buries much of eastern New York in a foot of snow. The snow remains on the ground until a day-long thaw on December 1. A Vault armored truck with prisoners is delayed by snow, and ice later forces the truck off the road in central New York. The Radioactive Man, Klaw, and Moonstone escape their captors.

### December

- (December 1, am) The Space Phantom impersonates Peggy Carter and infiltrates Avengers HQ. He is out to steal the secrets of Henry Pym's size-changing serums. Only Sersi or another telepath can detect his presence (Red FEAT). If no telepaths are available on this date, the Space Phantom escapes with samples of size changing gases.
- (December 2, am) All the active Avengers abruptly disappear during the day. The East Coast team disappears as of 9:15 am, followed by the West Coast team at 8:00 pm.
- (December 5, 12:35 pm) Dragon Man goes on a rampage near the tenements on 9th and Arthur on the Basic Set map. Daredevil attempts to stop him and two other figures, and is severely beaten. Spider-Man saves Daredevil, delivers him to a hospital, and vanishes in front of 21 witnesses in the emergency room at 12:55 pm. Dragon Man and his friends also teleport away before capture.
- (December 6, am) All of the inactive Avengers, excluding those in the adventure (Spider-Man's disappearance is listed above), vanish at 12:55 am.

- (December 10, pm) Sunstroke and the Living Laser escape from Project Pegasus with the aid of Moonstone and Klaw. They also steal the Beetle's armor from storage here.
- (December 12, pm) Yellowjacket is released from the Vault for good behavior and she is out on parole.
- (December 14, am) During a training exercise for the Guardsmen, the Absorbing Man and Titania escape the Vault and flee into the Rockies. Fellow prisoner Marvel Boy gets a concussion trying to stop them. Two Guardsmen are killed in the escape.
- (December 24, am) The remaining reserve Avengers fade away during a press conference on the disappearing heroes. The West Coast reservists fly out to investigate, and all but Dr. Pym and the Wasp vanish during the flight. The emergency call to assemble goes out this afternoon to the PCs.
- (December 25, pm) Snow falls heavily from 6:00 pm until 9:00 pm on the 26th, leaving the city under three feet of snow (-1 area/round land movement). City plows are all inoperable.
- (December 26, pm) Mysterious fires engulf two buildings on Arthur Street. Evidence points to arson, and buildings aren't saved because of snow blocking quick access by the fire department. Two buildings were demolished after the Dragon Man's rampage on May 5. Two more apartment buildings are on fire. If investigated, an unscrupulous landlord is found to be "fueling the fire" to collect insurance money.

## Adventure Timeline I

### Sunday, December 27

#### Setting

- The snow has stopped and has buried many cars and other objects underneath three feet of snow. Most city streets are closed to all traffic because of conditions. Huge and heavy patches of ice are on streets and sidewalks (-1CS on Agility FEATs and same movement penalty).
- Ice weighing down power lines has caused a number of line breaks. Ice is heaviest along Wilson Street and the Hudson Expressway. If nothing is done to clear the ice, power lines snap by 10:00 am and cause an Incredible rank fire in the warehouse at 5th and Wilson. The fire spreads to the adjoining warehouse by 10:45 am and both warehouses are consumed by 12:30 pm if not stopped.

#### Heroes

- The Mayor calls Avengers HQ at 6:00 am, asking for help to clear the streets and restore the plows to working order. There are any number of trapped cars as well as traffic accidents all along the map (including the Basic Sat map, if connected to the box map). The city can donate any equipment they are able to, though all of their snow plows are broken. Each hero can gain 20 Karma points for each person saved from injury and Popularity rises by +10 for their help. Ignoring the mayor causes a loss of -5 Karma each.
- The Avengers leader has a pre-scheduled briefing with the President at 11:00 am on the status of the team and any information on the location of his teammates (Karma worth +/-5).
- If anyone is on duty in communications between 1:10 am and 3:35 am, there

are eight separate alarms set off at remote storage facilities used by the Avengers. At 1:10 am, an alarm is received about a break-in at Stark Industries on Long Island. If contacted and/or investigated, it appears to be only a short in the alarm system and nothing is missing. The same occurs with alarms at 1:47 am (at Overton Storage), 2:03 am (at 5th and Wilson warehouse), 2:17 am (at Overton Storage), and 2:20 am (at Key Building on 7th and Harrison). All the alarms have lasted 1-3 seconds before cutting out, though the computer traces their signals. Three other alarms, at 2:21 am, 2:22 am, and 3:13 am respectively, are explained in the Villains section. If the Avengers monitor the police bands, they notice that this is a problem occurring all over the city. Every alarm system is malfunctioning at random, so the air outside is filled with alarms from cars, stores, and homes. Failure to check out alarms costs no Karma, though the three final alarms, if missed, cost heroes -20 Karma for allowing the thefts.

#### Villains

- There is a robbery at Overton Storage on 9th Ave. and Garfield St. at 2:21 am. The alarm sounds for only 2.7 seconds at Avengers HQ. Goliath and Klaw remove a number of large crates by breaking the reinforced skylights. Only an eight-year-old boy named Juan Martinez sees this occur. Within three minutes, they load an air car with some crates and fly off, projecting an illusion of a police helicopter. Missing goods include old Stark and Avengers technology such as a variety of older spare Quinjet parts and an old holographic projector.
- At 2:22 am, the alarms at the Key Building on 7th and Harrison activate and sound for four seconds before dying out. The Beetle and

Rampage set off high explosives on the roof, intending solely to cause more chaos and distract the Avengers. The two set the charges in six places on the roof, and finish at 3:18 am with the explosives all set to explode at 2:21 am. The two remain in civilian garb in Peabody Park to watch the "fireworks" until 2:24 am, their armor hidden under heavy trench coats.

- At 3:13 am a signal from the Avengers West Coast Compound announces a break-in. The Judge can determine who it is and what they are after. The burglars have been paid by the Radioactive Man to keep the Avengers occupied.
- At 5:12 am, Moonstone pays a visit to the Wizard, who is currently hiding under an assumed name in a private home on 11th Avenue off Harrison Street. The Wizard has been contracted to construct some lifting disks for the Masters. In need of the money and wanting a small hand in revenge against the Avengers, he has created 25 6-inch-wide disks, each generating an anti-gravity field of Amazing strength. Moonstone has a briefcase with \$12,000,000 for the Wizard in exchange for his services.

#### Action

- Between 1:00 pm and 3:00 pm, X-Factor is in town investigating a recent rally in Central Park where two mutants were apparently killed. Evidence is scarce, though theories point to the Watchdogs or the Sons of the Serpent.
- From 9:12 pm to 9:47 pm, The Fantastic Four fight against Blastaar within Four Freedoms Plaza. He has escaped the Negative Zone again and flees from the quartet, hiding himself in the city. The FF search the city, but Blastaar has vanished with little trace.

## Monday, December 28

### Setting

- Plows are finally clearing any blocked streets left from the holiday weekend. All street movement is back to normal by 10:00 am, though the sidewalks aren't fully clear until 1:00 pm. All ice has been cleared from power lines and all power has been restored.

### Heroes

- The Avengers have a 10 am meeting for the entire active membership. The meeting is interrupted by Jarvis and Juan Martinez. Juan tells them about "the huge brown guy with red eyes and the little red guy with the gun on his hand" and how they broke into Overton Storage on Sunday. Green Reason FEATs allow the heroes to identify Goliath and Klaw. If any hero openly doubts Juan's story, the boy bursts into tears and runs out of Avengers HQ despite Jarvis' best efforts to keep him there (-5 Karma).
- The news media phones Avengers HQ from 1 to 3 pm asking for a press conference. If one is called, heroes gain +5 Karma (role-playing bonus).

### Villains

- At 10 pm, Radioactive Man collects his team at a location of the Judge's choice for a debrief of their activities. All are present from 10 pm until 11:21 pm except for Tiger Shark. All are in civilian garb, but are still recognizable if close examination is allowed (Green Reason FEAT for any Avenger who studied their villain dossiers).
- Tiger Shark places the flying disks at strategic points on the submerged Avengers Island from 9:45 pm to 10 pm. From 10 pm to 11 pm, he activates the disks, freeing the island from New York harbor. He keeps the island submerged but pushes it closer to shore in preparation for tomorrow's raid on Avengers HQ.

- By 11:30 pm, Baron Zemo is notified about the meeting of the Radioactive Man's Masters of Evil. The informant can be a stool pigeon or it could be the Wizard or Tiger Shark looking for more money or power. In any case, the Baron knows of the plan for Avengers Island.

### Action

- The Prowler and Will O' The Wisp, on retainer with Silver Sable, are on the trail of AIM weapons smugglers. At a stakeout at the Wilson Street junkyard at 11 pm, they catch a sale in action. Unfortunately, the buyer is the Maggia, and the heroes have to clash with Tombstone for an hour.
- The Fantastic Four abandon their search for Blastaar to race out to the Richards family estate in California, which is under attack, possibly by the same perpetrators that attacked the Avengers' L.A. Compound earlier.

## Tuesday, December 29

### Setting

- The day's temperatures range from 0 degrees to 33 degrees, and skies are cloudy (-1CS for long range visibility).
- At 9 am, a water main bursts at 4<sup>th</sup> and McKinley, flooding the intersection to a two-area radius. The water flow is shut down by 9:30 am, but the areas mentioned are covered by ice (-2CS Agility, - 2 areas/round movement). The intersection is closed the entire day.

### Heroes

- By 4:00 pm the Support Crew and Jarvis all get a severe case of food poisoning from their lunch of Fabian Stancowicz's chili. Heroes of less than Remarkable Endurance need to make Yellow Endurance FEAT rolls to remain healthy, if they fail, all physical statistics, FEAT rolls, and actions are at - 1CS for 12 hours.

- The Avengers get an emergency call over local police bands at 5 pm from the Coda Recording Studio about a hostage situation (see Action).

### Villains

- With \$15,000,000 in gold, Baron Zemo pays the Wizard to betray Radioactive Man. The Baron receives a remote transceiver that overrides the anti-gravity disks' programming and grants control to him. This transaction is completed by 11 am.
- By 4:45 pm, Nitro has holed up in the Coda Records Studios. He is holding hostage a five-member filming crew of the soap opera Secret Hospital, four actresses (including Mary Jane Watson-Parker), and Rick Jones and his four member band (in a guest spot). Nitro originally wanted only the money in the offices. He has now decided that MJ's character of Sybil is too pedantic. And what could be better than a live taping of Sybil's death at the hands of a notorious super villain? Rick has covertly contacted the Pantheon, and the Hulk arrives to help if the Avengers need aid. If not, he'll arrive simply to take Rick back to Arizona, if Nitro begins to lose, the Absorbing Man arrives to help him escape, turning to air after Nitro is clear so they both can escape the heroes.
- The Baron convenes his own Masters of Evil contingent (not located on the maps) by 8:00 pm. Precautions taken by the Baron ensure no information leaks out of his or his new comrades' locations and activities.

### Action

- Rita DeMara (Yellowjacket II) takes up residence in one of the lofts on 5th Avenue. She spends the next month rebuilding her Yellowjacket costume and circuitry (the original was impounded by the Avengers).

## Wednesday, December 30

### Setting

- A sleet and ice storm covered the city between midnight and 2 am. All land movement is restricted (-1 CS on Agility FEAT rolls with a movement penalty of -2 areas/round) until 10 am when salt trucks and the sun melt off the glare ice that is over everything.
- A city work crew finally arrives to patch up the intersection and reopen the intersection by 2 pm.

### Heroes

- At 9 am, the Avengers are contacted by a Lieutenant Bruce Griffin at the Pentagon. Some documents holding schematics and security breakdowns of Hydro-Baee have apparently been stolen by unknown parties. If Lt. Griffin can find out anything more, he will contact the team immediately.
- If any of the PCs have magical talents or a contact with Dr. Stephen Strange, he arrives at Avengers HQ at 11:57 am and asks for the team's aid in battling a menace quite close by. His minotaur apprentice is with him, its appearance magically cloaked. It is the Judge's option if the security system reacts offensively to Rintrah's presence. See Action for more information.
- The Avengers are alerted to an ongoing robbery attempt at the Henkel Art Museum at 7:30 pm. See Plotline Two for more information.

At 10 pm another call comes from Lt. Griffin at the Pentagon. In his check of the Avengers' files, he discovered that some documents on their current security systems and codes were photocopies, not originals. Griffin apologizes for the information leak, and will personally track down the leak. The Judge can use this plot for later havoc. The leaks come from a well-placed colonel who is a thrall of the Leader. The Leader gets the data and releases it for stiff fees through an anonymous third party.

### Villains

- Rampage is at the Henkel Museum of Art, a trench coat and bulky suit over his armor. At 8 pm, he is to steal two pieces of Atlantean statuary for an anonymous buyer. He will meet him at midnight at 9th and Arthur with the pieces in exchange for \$5,000,000. See Plotline Two for details.

### Action

- The Prowler, the Sandman, Silver Sable, and Will O' The Wisp track down the AIM weapons developers to an isolated lab (Judge's location) and end up fighting MODAM. This confrontation occurs at 9:30 pm.

- A force field engulfs Peabody Park at 2 pm, forcing everyone out except any PCs, in costume or not. The field prevents anything from leaving the park. It is for the city's protection. Dr. Strange, Rintrah, and any PCs must close a dimensional rift in Peabody Park. See Plotline Three for details.
- At 9 pm, a battered guard alerts the Avengers to a battle in Wakanda. Ultron-13 had attacked certain sections of Wakanda's capital with a small army of robots. The Wakandan forces destroyed his attendant robot, but could not stop Ultron from escaping with some technology. They need no help now, but will keep them posted on what technology was stolen. They also inquire about their king who disappeared (The Black Panther was also abducted unawares by the Grandmaster), but express hope for his eventual return.
- Numerous accounts fitter in all day with people reporting sightings of a long-dead hero—Captain Marvel II! The Judge is encouraged to spread many accounts around, but if any Avengers spot the Captain, he quickly eludes them and disappears. See Plotline Two for more details.

## Thursday, December 31

### Setting

- There are high winds in the city from 8 am throughout the rest of the day. All airborne craft and super-powered beings have a -1CS penalty on flight speed and Control of aircraft (-1CS Agility in flight for flying beings).
- The winds tear loose three large steel girders from the incomplete Oracle Industries building on 5<sup>th</sup> Avenue. One topples into the junkyard, the other falls across the intersection of Wilson and 6th, causing a three-car pileup at 2 pm. Luckily, no one is immediately injured, but a young woman and her two small children are trapped in their car. There are a number of gasoline leaks from all three cars in the immediate area.

### Heroes

- The being that resembles Captain Marvel I appears wherever the Avengers are at 5:45 pm (when Radioactive Man's team begins its assault on the headquarters). He warns the Avengers about the Masters of Evil and accompanies them to the battle. He does not answer questions about his return from the grave or how he knows this except to say, "Cosmic awareness reveals many things thought hidden from the eyes of mortal beings."
- If the Avengers return to HQ, the villains can be confronted where the timeline places them. Captain Marvel fights with the heroes, but stays outside sensor range of HQ. See Plotline Two for more information.

### Villains

- Unless extraordinary precautions were taken with Rampage's arrest (holding in Avengers HQ or

immediate transport to the vault), he breaks free from his prison at 1 am with the help of the Beetle and Klaw.

- The first squad of the Masters of Evil V(a) attacks (something on the Basic Set Map) at 6:35 pm, screaming at all witnesses during the chaos to bring the Avengers to them!
- The second squad of the Masters of Evil V(a), which include Radioactive Man, the Living Laser, and Moonstone, arrives over Avengers Headquarters on a floating and apparently whole Avengers Island (see Plotline One and map for details) at 5:43 pm. The island is fully cloaked and invisible to radar and the naked eye, but if heroes show up to oppose them, the villains drop the cloak and show the island hovering over their heads. If any Avengers are there, or any other heroes, their task is to threaten the other Avengers into giving them a space-worthy Quinjet and the coordinates for the Blue Area of the Moon, or else they will let the island fall onto the headquarters and much of midtown. If no heroes are nearby to stop them, the villains use the Breaking and Entering tactic (see Teamwork) to obtain entry in two minutes and move quickly to the communications complex to steal data from the Avengers' computers. These secrets are well-protected and it takes the villains 25 minutes to break through the security codes of the computer to obtain them (6:10 pm). Once data is available, the villains take a hard copy of the coordinates, set up a transmit link to their own computers, and download every scrap of data to their computers. By 6:15 pm, they plan to go to the hangar, steal a Quinjet, and flee over the harbor and out to sea. They expect to bring the island with them by remote control.

- If Avengers are in danger of severe injury or defeat, whether at the HQ or elsewhere, by the Radioactive Man's Masters of Evil, Baron Zemo and his team arrive to "save my noble foes from such ignominious defeat at the hands of such mongrel traitors! They who dared usurp the legacy of my father and myself shall pay in blood for such perfidy!" The Baron promptly fades away from where he was and his Masters of Evil attack the villains alongside the Avengers. For details, see Plotline Two.

### Action

- The Taylor Foundation New Year's party is crashed by a number of known super villains looking to loot rich patrons of the party. The New Warriors go into battle against the Sinister Syndicate (minus the Beetle). The battle starts at 11:30 pm and ends at the stroke of midnight!
- In Times Square, the people celebrating New Year's Eve find themselves under attack by 40 airborne ULTIMATUM soldiers and the Flag-Smasher at 11:47 pm.
- Heroes on hand to stop them are Daredevil, Darkhawk, Hyperion, Doctor Spectrum, Whizzer, Shape, Arcanna, Lady Lark, and Power Princess of the Squadron Supreme. Out of a crowd of 25,000, 25 people are killed and 231 wounded. All the media and the newspapers (even the Daily Bugle) mourn the losses but praise the heroes for their rescue.
- The French Embassy is the target of the Black Fox who is looking to add a few new gems to his "retirement fund." The French hero Peregrine is on hand to stop him.

## Campaign Timeline II

### January

- (January 5, am. This can occur earlier or later at the discretion of the Judge.) The missing Avengers are teleported back to the precise spots they left from. They know exactly what's happened to them, though they can never remember who the Grandmaster's opponent was. The PCs receive many thanks from the Avengers for their help and are demoted to Reserve Status. In the Judge's campaign, the PCs can open their own branch team if it obeys the Avengers By-Laws and Charter.
- (January 12, am) The Fantastic Four take off in a spacecraft from Kennedy Airport at 11 am for space.
- (January 27, pm) At 3:13 pm (New York time), a small Kree scout cruiser crash lands on the Wakanda-Azania border in the heart of Africa. Out of a crew of seven, three survived and are loose in the jungles. Their craft is relatively intact and protected by an energy field, but the star drive is irreparably damaged. Their mission is to seek out the Avengers and slay them in retribution for the destruction of the Supreme Intelligence. One of the survivors is an Accuser (Judge's option of using Ronan the Supreme Accuser or a lesser known foe). Azania wants the Kree technology, the Kree want transportation to any known locations of Avengers, and the Wakandans want and need to stop both parties, with or without help from Earth's heroes.

### February

- (February 5, pm) Blastaar attacks Four Freedoms Plaza. (The Fantastic Four are still absent on a deep space mission.) Blastaar seeks to open the Negative Zone portal

- and bring his armies to Earth and plunder and conquer it.
- (February 6, am) After a few hours of working with the machines, Blastaar opens a portal, but brings through Annihilus and his armies!
- (February 7, pm) The Fantastic Four arrive from space and lead an army of heroes against Annihilus' forces.
- (February 24, am) Because of tempers and old hatreds raised during the Kree starship controversy, Azaria declares war on Wakanda and uses its Supremacists in flagrant violation of the laws against superhumans in a country's armed forces. The Avengers and the Black Panther are called in to arbitrate and to pull the Supremacists out of the conflict.

### March

- (March 11, am) Eight Sons of the Serpent hold a rally in Peabody Park, seeking converts for their messages of hate. A counter-protest forms and soon violence erupts. The

Avengers are meeting with the UNSC at the time and are under orders not to involve themselves.

- (March 15, pm) Ultron's plans come to fruition, as his new technologies allow him to broadcast energy waves over New York. They cause mass hallucinations of giant monsters rampaging through the city. All are geared toward driving all the humans out of the city and leaving it for Ultron to populate with his artificial servitors.

### April

- (April 1, am/pm) Madcap throws himself and the city a huge party and parade for April Fool's Day, complete with laughing gas grenades, squirt guns fitted with Adhesive X (a present from Baron Zemo, anonymously of course), and a 10-foot-diameter chocolate cream pie to be dropped on Avengers HQ in honor of Madcap's favorite hero, Captain America.

## Adventure Plotlines

### Plotline One: Island Raiders

With his recent escape from a Vault transport, Dr. Chen Lu, the Radioactive Man, has been in hiding for a month. During that time, he has assembled his own Masters of Evil team, seeing it as his right, since he is the sole remaining member of the original Masters of Evil. Klaw and Moonstone escaped with him, and they later collect Sunstroke's, the Living Laser's, and the Beetle's armor from Project Pegasus. Goliath and Tiger Shark are recruited and the two of them break Abner Jenkins out of Ryker's Island prison.

Chen Lu's plan for his Masters of Evil is to strike back at the Avengers slowly, taking things from them bit by bit. After stealing much of their own technology from the Avengers, including a space-worthy Quinjet, Lu's team can go to the Moon. Radioactive Man has heard stories of the Blue Area and the abandoned alien city there, and he wants to plunder it for alien technology. With all the technology of the Avengers and an alien culture, his Masters of Evil would be unstoppable!

For the most part, Chen Lu's team was composed by necessity and the allies he found closest to him Klaw, Moonstone, and Tiger Shark were his first recruits. From there, he freed allies from Project Pegasus and set his plan into motion. With Klaw and Tiger Shark working underwater, they cut away much of the decimated wreckage of Hydro Base and salvage some forgotten technology, as well as one-fifth of the island itself.

Moonstone contracts the Wizard to construct some lifting disks for the Masters. For \$12,000,000, he creates 25 6-inch-wide disks, each generating an anti-gravity field of Amazing strength. Tiger Shark later places the flying disks on the submerged island. The Radioactive Man plans to float the island

over midtown and Avengers Mansion (and threatens to drop it!), using it as a last resort bargaining chip to gain the coordinates of the Blue Area of the Moon and some missing pieces for the Quinjet.

On the day of the infiltration of the Avengers HQ, Klaw, Goliath, the Beetle, Tiger Shark, and Sunstroke, and perhaps Rampage, are to rampage through midtown and distract the Avengers while Chen Lu, Moonstone, and the Laser enter the headquarters. The island fragment is fully cloaked and invisible to radar and the naked eye, but if heroes show up to oppose them, the villains drop the cloak and show the island hovering over their heads. If any heroes are on hand, Chen Lu threatens to let the island fall. If no heroes are nearby to stop them, the villains enter HQ in two minutes and move quickly to the communications complex to steal data from the Avengers' computers. Once the information is available, they set up a link to their own computers and download every scrap of data to their computers. They write down separately the coordinates of the Blue Area. They then plan to go to the hangar, steal a Quinjet, and flee over the harbor and out to sea. They expect to bring the island with them by remote control and go to the Moon within an hour after that.

### Plotline Two: Zemo's Fury

After hearing of the New Masters of Evil, Baron Zemo angrily summons his own allies to attack those who dared usurp the legacy of his father. Zemo brings together the Absorbing Man, Grey Gargoyle, Quicksand, Titania, and Whirlwind. Under his direct technological control are the Dragon Man and the Super-Adaptoid as well. The Adaptoid is disguised as Captain Marvel I (using the powers of Spider Man, Daredevil, and Will O' The Wisp) to confuse the Avengers and the other Masters of Evil, allowing Zemo to have the upper hand.

Baron Zemo discovers Dr. Lu's plans for Avengers island and pays the Wizard to betray Radioactive Man. The Baron receives a transmitter that grants him control of the anti-gravity discs. He also sets up Rampage for a fall, anonymously posing as a black market buyer of artifacts to lure him to steal items. The Baron then notifies the Avengers of the thief. All this is done to confuse the Radioactive Man, who wanted Rampage as a final operative.

Baron Zemo's Masters of Evil are kept in reserve until needed. Then, Baron Zemo and his team arrive to "save my noble foes from such ignominious defeat at the hands of such mongrel traitors! They who dared usurp the legacy of my father and myself shall pay in blood for such perfidy!" The two villain teams clash, with the heroes saved by their former allies. Zemo then plans to escape with the island and its resources before any Avengers can pursue them. He has promised his allies that he can break them out of jail if they're captured. Otherwise they are to scatter and will be contacted later to regroup

### Notes: Super Adaptoid

"Captain Marvel I" aka the Super-Adaptoid is primarily used to keep everyone off balance and to gain information about the Baron's foes. If the Avengers seek to stop the Baron and his allies from escaping later, the Super-Adaptoid will be used at its fullest to keep them from capturing the Baron.

In Marvel Comics, the Super-Adaptoid is missing, stolen from the sunken Avengers Island by parties unknown. In this game universe, the Adaptoid was taken by Dr. Doom and repaired in Latveria. He is now energized by the Power Cosmic Generator after some internal modifications which slightly altered his powers. His original power source of a Cosmic Cube sliver was removed by Kubik. The Super-Adaptoid

now has full control of its coloration, and does not automatically revert to Kelly Green when two or more powers are added. He still cannot use more than one being's abilities at once, though he rarely needs to do so. As "Captain Marvel I," he uses Will O' The Wisp's sparkling flight trail and power emissions, Spider-Man's strength and spider-sense, and Daredevil's radar-senses at individual times to simulate Marvel I's strength, flight, energy blasts, and his cosmic awareness.

Doom restored the Adaptoid with limited programming to lead it to Zemo. Unknown to both the Adaptoid and Baron Zemo, the Super-Adaptoid was now programmed to transmit information back to Doom at all times. It serves Doom's purposes to allow a predictable enemy like the young Zemo to have control over a powerful toy for the moment. Doom planned an eventual attack against the Fantastic Four and needs the Avengers to be occupied with a battle against the Masters. Besides, with the Adaptoid as a free agent, and Doom able to recall the robot via implanted homing circuitry, he has a great way to inconspicuously learn about the other heroes.

### Plotline Three: Magic in the Park

Alerted to magic afoot in the park by Dr. Strange, the Avengers can help to seal a dimensional rift. There is a two-area-diameter dimensional warp at the center of the park that is releasing three impish creatures each round. They are called the G'haarak and have the following capabilities:

F A S E R I P  
 Ex Gd Rm Gd Pr Gd Gd  
 Health: 70 Karma: 24

- *Body Armor:* Their red skin provides them with Good protection vs. physical and energy damage.
- *Claws:* Excellent edged damage.
- *Flight:* Excellent speed.
- *Heat Generation:* They generate Good rank heat from their skin.
- *Phasing:* Excellent ability to turn into a mirage; anyone in contact with it takes Excellent heat damage.

These creatures are mischievous, like the faeries of legend. They are dead set on seeing what that neat white stuff is on the ground! They are simply curious. The rift is an accidental occurrence they took advantage of. Prepare for a snowball fight of universal proportions before Dr. Strange sends them home!

### Plotline Four: Invasion

Blastaar has escaped the Negative Zone and has brought a number of monsters through with him. Four Freedoms Plaza becomes a battle zone until Blastaar escapes into the city and goes into hiding. When the Fantastic Four leave the city, Blastaar enters their building and opens the Negative Zone portal for his invading armies. Unfortunately, the armies that issue forth are led by Annihilus! The icy winds of January in New York cannot stop the invasion from the anti-matter universe. Only the heroes are capable of sending them home!

## KNOWN POWERS

*Material/Energy Duplication:* Absorbing Man can duplicate the physical properties of any material he touches, giving him Strength, Endurance, and Body Armor equal to the material strength of the object touched. His Health increases if abilities increase, but does not decline if the material strength reduces his normal abilities. Creel can maintain a transformation indefinitely, and the limit for absorbing material strength is Unearthly. If the object touched has energy in it, such as a furnace or Thor's hammer, the energy properties are absorbed as well; Creel can retain such energies for no more than 10 rounds.

*Power Absorption:* Creel can duplicate superhuman powers by touching someone using them. This power allows absorption of up to Monstrous rank powers, but he cannot control them beyond the basic capabilities.

*Life Support:* If the Absorbing Man's body is broken into pieces, he can pull himself together mentally and will himself to become human, restoring his form. If specific pieces are detached, he can hold them in place and turn human to reattach them.

*Wrecking Ball (Equipment):* Formerly his prison ball and chain, this Remarkable strength object transforms as Creel does if held during the transformation.

**TALENTS:** Blunt Weapons (+ 1CS to Fighting and Throwing).

## KNOWN POWERS

None. All of Ant-Man's powers are derived from his equipment.

## EQUIPMENT

*Cybernetic Helmet:* Ant-Man's helmet has these capabilities:

- *Disrupter Sting:* Ant-Man can fire an Excellent rank energy bolt from the front of his helmet.
- *Gas Mask/Air Supply:* The helmet has a retractable seal and Ant-Man can breathe for four hours with the helmet's normal air supply. This helmet gives Excellent protection against toxic gases.
- *Insect Communication and Control:* Ant-Man has the Remarkable rank ability to "talk" with ants and other insects. His standard power stunts are summoning swarms to attack foes, freeing himself from traps, and spelling out messages on floors for allies.
- *Loudspeaker:* This allows Ant-Man to be heard at normal volume when he is reduced to ant-size.
- *Radio Communication and Control:* Ant-Man can receive and broadcast radio signals to communicate at a distance. His transmitting range is Amazing (20 areas).

*Shrinking:* Ant-Man has incredible rank shrinking powers using Hank Pym's shrinking gas. This power can be used to shrink other people or objects.

**TALENTS:** Business/Finance, Computers, Electronics, and Repair/Tinkering skills.

## AVENGERS, GREAT LAKES

### BIG BERTHA

Ashley Crawford

ID: Secret

Team Affiliation: Great Lakes Avengers;  
Ally of Hawkeye and Mockingbird

TY	TY	RM	IN	TY	GD	TY
6	6	30	40	6	10	6

Health: 82  
Resources: EX  
Karma: 22  
Popularity: 0

### KNOWN POWERS

*Body Transformation:* Ashley can increase her body mass to transform herself into the immensely obese Big Bertha.

In this form, she has these powers:

*Body Armor:* Her toughened skin and semi-elastic form grant her a Remarkable rank Body Armor. She can catch projectiles in her mass and reflect them back at attackers for Poor Blunt damage. And by relaxing and taking a blow, she can allow blunt hand-to-hand weapons to hit her and "bounce" back for Good force damage through the shaking weapon.

*Leaping:* At Unearthly rank, Bertha can jump up to 100 feet.

**TALENTS:** Modeling, Fashion  
Photography, and Pilot Aircraft.

### DINAH SOAR

**KNOWN POWERS**

None. All of Baron Zemo's power is derived from his equipment.

**EQUIPMENT**

*Adhesive X:* Adhesive substance of Unearthly strength that bonds to surfaces in one round.

*Cybernetic Control Helm:* Baron Zemo's gold helm contains cybernetic circuitry that allows him to control specifically conditioned pawns, whether human or artificial. Zemo's helm has a control range of 20 areas (Amazing rank). Commands are transmitted telepathically and the helm allows Zemo to control up to two targets.

*Energy Pistol:* This pistol has three different energy settings, but all settings operate with a five-area range:

- *Disintegrator:* Remarkable intensity disintegrator changes 30 cubic feet of inorganic matter to light energy per burst. This acts as a Remarkable energy attack on living tissue.
- *Laser:* This laser has an Excellent energy attack and is the setting to energize the humanoid robots (see following).
- *Stunner:* Targets must make an immediate Endurance check vs. Stun against this Remarkable intensity attack.

*Humanoid Robots:* These humanoid robots, an old invention of Baron Zemo I, are usually six inches tall, but their circuits hold a few surprises for Zemo's enemies. Their primary and secondary statistics are:

### KNOWN POWERS

None. All of Doctor Demonicus' power is derived from his equipment. Doctor Demonicus suffers from a form of cancer that has mutated his face and skin. Eighty percent of his hair has fallen out and he has grown prominent horns on his forehead. His skin now has a large number of mottled gray patches on it. His cancer is currently in remission, but his dependency on his suit remains undiminished (see below).

### EQUIPMENT

*Armored Suit:* This suit provides

Demonicus with Typical Body Armor against physical and energy attacks. It also maintains a state of remission for his unique form of cancer caused by radiation exposure.

*Lifestone:* Dr. Demonicus still retains a small piece of a radioactive meteor he has dubbed the "lifestone." The doctor uses the lifestone's radiation to artificially mutate both humans and animals. Under controlled conditions, Demonicus can create any number of super-powered guardians for his new island nation of Demonica.

**TALENTS:** Biochemistry, Bioengineering, Electronics, Genetics, Geology/Plate Tectonics, and Repair/Tinkering.

**KNOWN POWERS**

*Projective Shrinking:* Dr. Pym can generate a field of "Pym Particles" to alter the size and mass of any inorganic object he touches with Incredible effect. Intelligent and/or organic targets touched by Dr. Pym can make green or better material strength FEAT rolls (for robots and animated constructs) or green or better Psyche FEAT rolls (for humans and other living beings) against Pym's Incredible power to resist the size altering affects.

**EQUIPMENT**

*Micro-Equipment:* Dr. Pym maintains a variety of miniaturized equipment in his jumpsuit. Items can be enlarged to normal or greater size in one round. Unless stated otherwise, these items have Remarkable material strength. Dr. Pym carries at least the following:

- *Bat:* Good Blunt damage.
- *Chain Saw:* Excellent Edged damage.
- *Energy Gun:* Pistol (three-area range) or Rifle (six-area range) with Remarkable Stun or Incredible Energy attacks.
- *Flight Pack:* These back-mounted jets allow Hank a Typical air speed (six areas/round) with Excellent Control. Flying in a vacuum, speed is Good (eight areas/round).
- *Helmet:* Pym carries an old Ant-Man helmet. It is the same as Scott Lang's Ant-Man helmet except Pym's has no helmet disrupter (see Ant-Man II).

- *Laser Drones:* Excellent Stun or Remarkable Energy attacks (five-area range for both). These can fly with Poor air speed on remote control.
- *Restraining Spheres:* These reinforced glass globes are used to trap and restrain foes (green or better Agility FEAT roll to avoid capture). Some globes might be fitted with devices for particular enemies like energy dampers (Incredible Energy Absorption) or power inhibitors (cancel up to Incredible rank mutant powers).

**TALENTS:** Biochemistry, Biology, Chemistry, Electronics, Engineering, Genetics, Mechanics, Physics, Repair/Tinkering, and Robotics.

**ROVER**

Rover is Pym's latest robotic creation. It is a two-seated vehicle shaped like an ant's head with limited artificial intelligence. Rover can speak and has a childlike curiosity about its world (Typical Reason). Its capabilities are:

- *Acid/Gas Attack:* Rover can emit acid sprays or Knock-Out gas attacks of Remarkable intensities to a range of two areas. Either attack covers one full area for effects.
- *Armor:* Rover and its passengers gain Excellent protection from physical and energy attacks.
- *Fire Control/Generation:* Rover can project flames of Excellent intensity up to two areas away. Rover is also equipped with fire extinguishing foam to snuff Excellent fires.
- *Flight:* Rover has an Amazing ground speed (eight areas/round) and flies with Excellent air speed (10 areas/round).
- *Gripping Claws:* Rover has retractable claw cables with Remarkable strength and fighting Ranks (Grappling or Blunt attacks; range of two areas).
- *Wall-Crawling:* Rover's treads allow it to move up vertical surface's at Remarkable speed (six areas or floors/round).

### KNOWN POWERS

*Gravity Manipulation:* Graviton's Shift Y control over gravity is limited to six effects at any given time, the average being four effects in one round. If he attempts more than four effects in one round, he must make a green or better power FEAT roll. Failure cancels all but the two most recent power effects. Graviton's power stunts are:

- *Force Bolts:* Unearthly intensity/range.
- *Force Field:* Unearthly physical protection and Amazing energy protection.
- *Gravity Increase:* Graviton can increase the weight of targets by Unearthly increments. Living targets must make green or better Endurance FEAT rolls against this power to move.
- *Gravity Reduction:* He can also reduce gravity's influence by Unearthly amounts. He can then lift objects as if his power rank were his Strength.
- *Levitation/Telekinesis:* If items are less than Unearthly weight, Graviton can cause such objects to levitate by reducing their gravity. He can levitate and move these items through the air with up to incredible control and speed (20 areas/round).

**TALENTS:** Physics.

### KNOWN POWERS

*Body Transformation—Self and Other (Stone):* Using his right hand, Duval can transform people or objects to Incredible material strength stone. The effect lasts for one hour and petrifies them for the duration. This power works through clothing, but touching someone in a battlesuit affects the suit only. The power is non-conductive, meaning that only the person or object touched turns to stone. The maximum amount of material affected at once is 10 cubic yards. The Grey Gargoyle has a glove that blocks his power when he doesn't want to use it.

By touching himself with his right hand, Duval transforms his entire body into a living statue. He retains his mobility in his stone form and gains the following powers:

- *Body Armor:* His Stone skin gives him Incredible protection against all physical and energy attacks.
- *Enhanced Abilities:* Duval's primary physical abilities are all Typical, giving him a Health of 24. Transformed, Duval's abilities are as listed above.
- *Life Support:* In stone form, Duval does not need air, food, or water.
- *Temperature Resistance:* The Grey Gargoyle has Incredible resistance to cold, fire, heat, and radiation.

**TALENTS:** Acrobatics, Chemistry, Martial Arts B and E.

## KNOWN POWERS

**Battle Scythe:** The Incredible strength steel scythe inflicts Excellent Edged damage or Remarkable Blunt damage with the flat of the blade. The scythe can cut into any inanimate or living matter. Natural Body Armor (like Thor's) is reduced by two ranks but artificial Body Armor (like Iron Man's) protects with normal effectiveness.

- **Blaster:** Causes Remarkable Force damage with a range of five areas.
- **Knock-Out Gas:** Excellent intensity gas fills one area.
- **Rotor:** The scythe acts as a helicopter blade (fall from any height), and can whirl to provide Excellent protection against projectiles.
- **Stunner:** Monstrous Stun attack with one area range and permanent coma state, reversed only by the scythe.

**Magic Use:** The Grim Reaper has learned a number of magical spells and effects:

- **Teleportation (Self and Others):** The Grim Reaper can teleport himself or up to three others up to Incredible distances away.
- **Dimensional Rift:** Using his scythe, the Reaper can cut tears in dimensional walls, creating teleportation gateways of Monstrous rank and range.
- **Illusions:** This spell allows the Reaper to cast illusions (or set the magic to activate under certain conditions like a command word) of Excellent ability.

The illusions have visual and aural components.

**Zombie Powers:** Eric was reanimated as a zombie with the following powers:

- **Body Armor:** Excellent rank.
- **Health-Drain Touch:** The Reaper has Incredible rank Health Absorption from living targets by touching them with his scythe. He can absorb more than his normal Health limits and excess Health points absorbed are divided among his Health, Strength, and Endurance. Enhanced scores decrease by 10 points/hour until down to standard levels. The Reaper's Health decreases by 10 points/hour until normal, and he can maintain his normal Health level for 12 hours without absorbing any life-energy. After that, his Health drains at a rate of five points/hour until the Reaper absorbs enough life-energy to return his Health point total to normal.
- **Invulnerability:** Class 1000 resistance to disease, heat, cold, radiation, and toxins.

**LIMITATIONS:** The Grim Reaper must absorb the life force of at least one human (minimum of 24 Health) per day to maintain his undead existence. The Reaper cannot absorb Wonder Man's lifeforce. If the Grim Reaper comes into contact with Wonder Man, there is an immediate life energy drain of Remarkable (30) intensity from the Reaper into Wonder Man.

**TALENTS:** Weapons Specialist (Scythe).

**KNOWN POWERS**

*Enhanced Vision:* Remarkable eyesight.

**EQUIPMENT**

*Bow:* This specialized bow allows Hawkeye to fire three arrows/round with a range of seven areas.

*Harness:* His tunic harness has special quick-release compartments for holding 36 additional arrowheads.

*Hearing Aids:* Hawkeye is 80 percent deaf because of prolonged exposure to hypersonics. He now wears specialized miniature hearing aids that allow him to hear normally. They can be boosted to provide Remarkable hearing within a range of two areas (for locating hidden mechanisms or other clues) as well as shutting them off to afford Remarkable protection against sonic attacks. This does not protect Hawkeye against any sonic force attacks, but it does prevent him from being hypnotized or stunned by sonic energy attacks.

*Quiver:* The quiver has a 36-shaft capacity. Each arrow is clamped to the base of the quiver, unlocked by a slight twist of the nock while drawing. Twelve of the shafts are standard target point arrows (Typical Shooting damage) and another six have three-bladed broadheads (Good Shooting damage). The remaining 18 have custom heads on them. The 12 target points can become "trick" arrows by adding a modular arrowhead from the harness (two seconds to add arrowhead).

*"Trick" Arrowheads:* Hawkeye's modular arrowheads all have a range of seven areas except where noted below. Each

of these arrowheads is on a shaft in Hawkeye's quiver and he has a spare stored in his tunic harness except for the Adamantium and Vibranium arrowheads. Hawkeye only has one of either of these special arrowheads on hand when expecting a fight against Ultron or another heavy-weight foe.

- *Acid:* MN, three-area range.
- *Adamantium:* EX Edged damage and pierces up to Unearthly materials, combined with Monstrous rank Electrical arrowhead.
- *Blunt:* Excellent Blunt attack.
- *Bola:* Remarkable entangling attack.
- *Boomerang:* Computerized returning head, can add to other arrowheads.
- *Cable:* Two-area long Incredible strength cable.
- *Electrical:* AM damage, five-area range.
- *Explosive:* Amazing Force damage.
- *Flare:* GD intensity light in 2-area radius, Amazing damage to sighted target.
- *Magnetic:* Incredible adherence to metal, can carry other arrowheads.
- *Net:* Incredible entangling attack.
- *Putty:* RM adhesion to rough surfaces, good for stopping exposed machinery.
- *Rocket:* Boosts range by one area. Can carry other arrowheads.
- *Smote:* EX Darkness in one area.
- *Sonic:* Excellent noise in one area, roll green or better Endurance FEAT or be stunned for 1-10 rounds.
- *Suction Cup:* RM Adhesion to smooth surfaces, can add to any arrowheads.
- *Tear Gas:* RM Tear Gas in one area.
- *Thermal:* Remarkable Heat damage.
- *Vibranium:* Must have supplement Magnetic, Putty, or Suction Cup arrowhead to stick to target. Can deaden Remarkable energy or force at target.
- *Vibration:* Excellent Force damage.

**TALENTS:** Archery, Arrowhead Design and Construction, Circus Lore, Leadership, Martial Arts A and E, Marksman, Weapons Specialist (Bow).

*Astral Detection:* Because of some unknown factor, the Hulk has the Unearthly rank ability to see and hear astral forms.

*Body Armor:* The Hulk's emerald hide grants him Monstrous protection from physical damage and Amazing protection from energy damage.

*Invulnerability:* Bruce has Class 1000 immunities to cold, disease, fire, and heat.

*Leaping:* His powerful legs allow Bruce to leap to a maximum range of Class 5000 (50 areas/round).

**TALENTS:** Crime, Electronics, Physics, Radiation (Specialist—Gamma Rays).

**KNOWN POWERS**

The Torch's flame powers are currently deactivated in the Marvel Universe, but not necessarily in the game universe. The following are his normal powers:

*Android Body:* The Torch is a synthezoid created in the 1940s. His artificial nature gives him:

- *Disease Resistance:* Unearthly rank.
- *Universal Donor:* His blood can be used to replace human blood.

*Fire Control and Generation:* The Human Torch generates Monstrous intensity flames and has Unearthly control over any flames' form and intensity. Ha also has these power stunts:

- *Body Armor:* MN protection vs. physical and energy attacks; Shift 0 vs. cold-, water-, or wind-based attacks.
- *Fireballs:* Monstrous damage, three-area range.
- *Flame Constructs:* AM intensity flame barriers and cages, three-area range.
- *Flight:* EX speed (10 areas/round).
- *Invulnerability:* Immune to Fire and Heat.
- *Nova Flame:* Burst of Shift Z intensity damage to all within a one-area radius, Shift X damage to all within five-area radius, powers at Feeble for 1-10 rounds.

**LIMITATIONS:** Cold-based, water-based, or wind-based attacks of Shift X or greater extinguish Torch's flames.

**TALENTS:** Law Enforcement and Trivia (1940s and 1950s).

## KNOWN POWERS

None. All of Iron Man's powers are based on his technological battle suit.

## EQUIPMENT

*Mark VIII Armor:* This red and gold suit of armor is the most recent all-purpose Iron Man armor. Its powers are:

- *Ability enhancement:* All physical abilities are enhanced as follows:

	F	A	S	E
I:	IN	IN	MN	UN
II:	IN	IN	MN	UN

- *Anti-Theft Device:* Attempts to copy or dismantle the circuitry cause the armor to detonate in two rounds for Incredible damage to all in one area.
- *Body Armor:* The Remarkable strength material armor can be reinforced by the force field, granting Amazing physical and energy protection.
- *ECM:* The armor has Remarkable invisibility to radar and sonar.
- *Electro-Magnetic Pulse:* The EMP

shuts down all electrical devices (and all but Iron Man's life support and sensors) in one area for six minutes.

- *Energy Absorption:* Iron Man can absorb up to 300 points of energy for weapons systems, raising them to Monstrous for a round. He can absorb an incoming attack with a yellow or better FEAT roll on the Unearthly column.
- *Flight:* Iron Man flies at Excellent (10 areas/round) speed. He can fly at Shift X (50 areas/round) in clear flightpaths.
- *Force Field:* Iron Man can cancel all weapons and shunt all power to this system for Monstrous protection.
- *Magnetism:* He can magnetically control metal items (Incredible ability).
- *Plasma Bolts:* These energy pulses cause seven points of force damage per area they travel with a range of 15 areas (maximum of 100 points of damage).
- *Protected Senses:* The armor gives Remarkable protection against sound and light-based attacks. If blinded, the effect lasts for one round.
- *Repulsors:* Iron Man's primary weapons are his repulsors. Fired from his gauntlets, they do Amazing force damage to a range of 10 areas.
- *Sensors:* Iron Man has Incredible rank

radar/sonar/electronic systems to detect objects, radio waves, and other communication signals.

- *Unibeam:* The armor's chest beam (three-area range on all effects) can produce an Incredible Heat Beam, an Amazing Laser, a Remarkable Light Beam, a Remarkable strength Tractor Beam (Telekinesis), and can make Good holographic illusions of Iron Man.

## LIMITATIONS:

Tony Stark was an alcoholic but was not drinking the past few years. Tony's nervous system is totally destroyed because of a cybernetic implant and, as a result, he now needs a special artificial skin that cybernetically performs as his nervous system. He is in cryogenic deep freeze until his condition is repairable, and Rhodey is acting as Iron Man.

## TALENTS

*Iron Man I:* Bionics, Business, Cybernetics, Electronics, Engineering, and Weapons Design.

*Iron Man II:* Martial Arts B and D, Military, and Pilot Aircraft (Combat and Normal).

 Klaw's body is composed of sonic energy. If his Health falls to 0, his form is absorbed into his sonic converter. He has these powers:
- *Body Armor:* Klaw has Incredible rank physical protection and Amazing rank energy protection.
  - *Life Support:* Klaw does not need to eat, drink, breathe, or sleep.

**LIMITATIONS:** Klaw's sonic body has some special weaknesses:

- *Sonic Attacks:* Sonic attacks reduce Klaw's Health by the intensity, ignoring his Body Armor.
- *Vacuum:* Exposure to a vacuum inflicts Remarkable damage to Klaw each round he is in it.
- *Vibranium:* Attacks with any Vibranium weapons inflict full damage on Klaw. Klaw needs a green or better Endurance FEAT roll to remain solid in the presence of 10 pounds or more of Vibranium.

**EQUIPMENT**

*Sonic Converter:* Klaw's right hand is replaced with an Incredible material strength prosthetic device that manipulates sound. If the converter is destroyed, Klaw must make a green or better Psycho FEAT roll or fall unconscious. The converter has these effects:

- *Sonic Blasts:* Klaw's converter fires Incredible intensity sonic force blasts

with a 10-area range.

- *Sonic Force Field:* Klaw can project an Incredible strength force field that covers up to one area.
- *Sonic Objects and Creatures:* Klaw can create solid objects of Remarkable material strength and mobile sonic creatures that he can control (range of six areas). They take damage normally and all have these statistics:

### KNOWN POWERS

None. All of Mockingbird's power comes from her skills and equipment.

### EQUIPMENT

**Battle Staves:** Mockingbird wields a pair of Remarkable material battle staves that cause Excellent hand-to-hand Blunt damage. The staves also have the following combat options:

- **Javelins:** Fitted together and thrown as a javelin, they cause Remarkable Blunt damage to any target (four-area range).
- **Projectiles:** Mockingbird has spring-loaded holsters for the staves on her forearms. She can release the staves directly from the holsters and cause them to fly up to three areas away for Excellent Blunt damage. She can catch the staves on the rebound with a green or better Agility FEAT roll.
- **Vaulting Pole:** Joined together and elongated, Bobbi has an eight-foot-long vaulting pole.

**Body Armor:** Mockingbird's costume provides her with Remarkable protection from physical attack and Excellent protection from fire.

**TALENTS:** Acrobatics, Biology, Detective, Espionage, Law Enforcement, Weapons Expert (+1CS Fighting with battle staves).

### KNOWN POWERS

None. All of Moon Knight's power comes from his equipment.

### EQUIPMENT

*Moon Knight Armored Battle-Suit:* Moon Knight wears an armored battle-suit of Excellent material strength. It contains the following abilities:

- *Body Armor:* Excellent physical protection and energy protection, and Remarkable fire/heat resistance.
- *Crescent Darts (Silver, Adamantium, explosive):* Can be fired from his gauntlets with a Good range, and they cause Good (silver) or Excellent (Adamantium) Edged damage or Remarkable force damage (explosive).
- *Gliding Cloak:* Poor air speed.
- *Magnetic grapple in gauntlets:* Allows immediate retrieval of truncheon or darts within one area.
- *Remote Control:* Remarkable mental or preprogrammed control over his vehicles up to a range of 40 areas.
- *Truncheon (Adamantium):* Class 1000 material truncheon (Remarkable Blunt damage) can expand into an eight-foot pole. The truncheon's center telescopes outward for expansion and can inflict Excellent Blunt damage.
- *White Noise Generator:* Earpieces that provide Remarkable rank protection against sonic attacks.

**TALENTS:** Art, Business/Finance, Driver, Handguns, Military, Weapons Specialist (Crescent darts).

- Magic Use:* Wanda can manipulate magic with Incredible ability. Her known spell/abilities are:
- *Eldritch Bolts:* Wanda can generate magical force or energy bolts of Remarkable rank (eight-area range).
  - *Eldritch Shield:* She can also form magical shields that provide Incredible protection from physical or energy attacks (including magic).
  - *Telekinesis:* She can manipulate magical forces to allow her a Good rank telekinetic power.
- Probability Manipulation:* Wanda's primary power is her Amazing rank ability to alter probability. With this power, the Scarlet Witch can alter the probabilities so improbable (not impossible) events do occur. The Witch's player does not know what will occur. The Judge makes that decision after seeing the strength of the FEAT roll. White results create situations bad for both heroes and villains, whereas red results are highly beneficial to the heroes and not the villains. Green results generally do not stop foes, but have small effects such as a -1 or -2CS to their attacks. Each use of this power is highly individual. Karma can be added to the roll when using this power.

### KNOWN POWERS

*Eternal Abilities:* Sersi has the standard abilities of Earth's Eternals, though she focused the majority of her power into Transmutational abilities and passed it off as illusion or magic over the centuries. Her powers are:

- *Cosmic Energy Manipulation:* Sersi can manipulate cosmic energy with Amazing ability, projecting Amazing beams of force, heat, or light from her eyes.
- *Flight:* Sersi can fly at Shift X air speeds (50 areas/round).
- *Illusion Generation:* Sersi generates Unearthly rank illusions that affect all five human senses.
- *Invulnerability:* Sersi has Class 1000 resistance against cold, disease, electricity, energy, heat, radiation, and toxin attacks. She does not age. She can still be affected by Stun and Slam effects as well as Kill results. Kill results are only effective if they scatter Sersi's atoms over more than six areas.
- *Levitation:* Sersi can levitate herself and others with Shift X ability.
- *Matter Transmutation:* Sersi has the Unearthly ability to alter molecular structures, allowing her near-unlimited power in altering all forms of matter.
- *Mind Control:* Sersi can control the minds of Eternals, humans, and Deviants with Excellent ability (green or better Psyche FEAT roll against Excellent rank to resist).

- *Telekinesis:* Sersi can telekinetically manipulate objects with Incredible strength and generate a Force Field of Excellent rank.
- *Telepathy:* Sersi can communicate telepathically with Excellent ability, though she cannot mentally read the mind of any Deviant.
- *Teleportation:* At Shift Z rank, she can teleport up to 400 areas away, but she must make a red Psyche roll and a red Endurance FEAT roll to do so without becoming paralyzed with pain for 1-10 rounds at her destination. No Karma can be spent on these rolls.
- *Uni-Mind:* Sersi, like all Eternals, can join the Uni-Mind.

## KNOWN POWERS

*Power/Shape Imitation:* The Space

Phantom can transform his body into a duplicate of any being of any size or morphology. In changing his form, he gains any powers indigenous to that form, whether natural or technological in nature. The upper rank he can adapt any powers is Unearthly. The Space Phantom's power is limited to a one-area range, so he must be close to his victim. When the Phantom adopts the form of a given person, that person is teleported to Limbo in a state of unconsciousness. This transfer takes one round. The Space Phantom can maintain his duplicated form for an indefinite period of time.

**LIMITATIONS:** The Space Phantom cannot imitate the forms of gods, immortals (or the power of immortality) or magical beings and items. If he attempts to do so, he is catapulted into Limbo (though he is not unconscious because of the transfer).

**TALENTS:** Leadership, Military, and Time and Dimensional Travel.

**KNOWN POWERS**

*Emotion Control:* Starfox has the Amazing rank power to stimulate the pleasure centers of a target's brain. This affects creatures for 10-100 rounds, making them friendly and cooperative with Starfox. It is avoidable only with a green or better Psyche FEAT roll or if Starfox orders his victim to perform an act that would cause that person to lose Karma.

*Eternal Abilities:* The Eternals of Titan have focused their energies in different ways than those on Earth, and thus their base abilities are different. The following abilities are standard for many, if not all Titanians, though the power ranks are higher than normal:

- *Body Armor:* Starfox's skin provides Good physical and energy protection.
- *Flight:* Starfox can fly at Remarkable air speeds (15 areas/round).
- *Invulnerability:* Eros has Class 1000 rank resistance to the effects of aging, cold, disease, electricity, heat, radiation, and toxins.
- *Regeneration:* Starfox, though not as in tune with his body's molecules as Sersi or Ikaris, has enough control to generate Amazing rank self-healing.
- *Uni-Mind:* Starfox, like all Eternals of Earth or Titan, can join the Uni-Mind.

**TALENTS:** Electronics (Earth and Titan), Pilot, and Repair/Tinkering.

### KNOWN POWERS

None. All of his power comes from the Stingray armor.

### EQUIPMENT

*Stingray Armor:* The Stingray armor was created for underwater marine biology work but also makes him a part-time hero and a staunch ally of the Avengers. His powers are:

- *Ability Enhancement:* The suit boosts his innate Agility by +2CS, Strength by +5CS, and Endurance by +3CS.
- *Body Armor:* The Stingray armor provides Excellent energy protection, Remarkable physical protection (includes depth pressure), and Amazing protection from cold, electricity, and heat.
- *Electricity Generation:* Stingray can fire Incredible intensity electricity blasts (one-area range). Victims must make green or better Endurance FEAT rolls or fall unconscious for 1-10 hours.
- *Gliding:* He can attain Poor (four areas/round) air speed up to 100 feet in the air.
- *Swimming:* Stingray can swim underwater at Good speed (four areas/round).
- *Water Breathing:* He has artificial gills on his suit for breathing underwater.

**TALENTS:** Cetology, Ichthyology, Oceanic Archaeology, and Oceanography; Incredible Reason for adapting humans to underwater life.

## SUB-MARINER

Health: 185                      Karma: 76  
Resources: MN                      Popularity: 15

### KNOWN POWERS

*Atlantean Body:* Namor's hybrid human/Atlantean body is still adapted for life on both sea and land. He is immune to depth pressures and has Excellent resistance to cold.

*Flight:* Namor's ankle wings allow him Poor rank flight (four areas/round). Currently, Namor's ankle wings have atrophied and do not work. How long before the wings regrow is unknown.

*Swimming:* Namor can maintain Typical speeds (three areas/round) underwater.

**LIMITATIONS:** For every hour away from water, Namor's Strength and Endurance drop by -1CS until they reach a minimum of Typical rank. This decrease doesn't affect his Health. Namor was, until recently, under an Unearthly strength amnesia spell cast by Master Khan; he had no idea of who he was, and he did everything in his power to flee from people who knew him. Through great strength of will, and the aid of Dr. Doom, Namor broke free and his memory is restored.

**TALENTS:** Atlantean Lore and Science, Ichthyology, Leadership, Oceanography, and Politics.

### KNOWN POWERS

*Solar Energy Manipulation:* Sunstroke can absorb, store, manipulate, and project solar energy in the forms of heat and light. He has developed the following abilities with his power:

- *Gliding:* By creating thermal updrafts, Sunstroke can glide with Typical air speed (six areas/round).
- *Heat Blasts:* Sunstroke can fire Incredible rank heat blasts up to six areas away. He can also radiate heat outward from his entire body. Causing Incredible heat damage to all within his area and Excellent damage to all within adjacent areas.
- *Light Burst:* Sunstroke can also produce Incredible intensity bursts of light that can blind opponents for 1-10 rounds if an Endurance FEAT roll is failed.

### EQUIPMENT

*Costume:* Sunstroke's costume provides him with glider wings to harness thermal updrafts and use them to glide. Without them, he could glide at only Feeble speed (two areas/round).

**LIMITATIONS:** Sunstroke can only wield his powers for a maximum of 40 turns when not in direct sunlight. He can recharge his powers and stores of energy after one hour of exposure to sunlight.

**TALENTS:** Unknown.

*Eternal Abilities:* The Eternals of Titan have focused their energies in different ways than those on Earth, and thus their base abilities are different. Thanos' abilities are higher than any other Eternal of Titan including his father, Mentor. It has been suggested that Thanos is either a mutant Eternal or he has boosted his abilities and powers through bionics and mystic enhancements:

- *Body Armor:* Thanos' skin provides Monstrous physical and Amazing energy protection.
- *Energy Generation:* Thanos can fire plasma bolts from his hands or eyes (Unearthly intensity force damage).
- *Invulnerability:* Thanos has Class 1000 rank resistance to the effects of aging, cold, disease, electricity, heat, radiation, and toxins.
- *Life Support:* Thanos can survive indefinitely without food, air, or water. He is capable of sustaining his own life within a vacuum.
- *Mental Force Bolt:* He can fire psionic bolts of force into the minds of his targets (Amazing intensity and range).
- *Teleportation:* Thanos can teleport with up to 10 others in his immediate area with Unearthly ability and range.

**TALENTS:** All Scientific Skills, especially Engineering and Repair/Tinkering.

#### KNOWN POWERS

*Body Armor:* Thor's skin provides

Excellent physical protection and Typical energy protection.

*Illusion Detection:* Thor gains a +1CS to Intuition when seeing and resisting illusions.

*Invulnerability:* Thor has Excellent resistance to aging, cold, disease, heat, radiation, and toxins.

#### EQUIPMENT

*Belt of Strength (Thor I only):* This belt boosts Thor's strength to Shift X while worn. When it is removed, Thor's Endurance is -2CS for 24 hours.

*Mjolnir:* Thor's hammer, Mjolnir, is made of Uru, a Class 3000 material. Thor's Fighting rank is Shift Y with the hammer, and the hammer causes Shift X Blunt damage. Thor can throw the hammer up to 10 areas away. The powers of Mjolnir are:

- *Air Control:* It has Monstrous intensity wind generation, and gives Monstrous protection vs. projectiles for all within one area. Thor can also use this to carry others with him at Incredible flight speed (20 areas/round).
- *Alter Ego:* Thor II can change from Thor to Eric Masterson and the hammer becomes a wooden walking stick. If the hammer and Thor are separated for more than one minute, he reverts to Eric. His statistics are:

F	A	S	E	R	I	P

- *Automatic Return:* Mjolnir returns to Thor's hand after it is thrown, whether it hits its target or not.
- *Deflection:* By spinning his hammer before him, Thor can provide Remarkable protection against physical, energy, and magical attacks.
- *Dimensional Travel:* By spending all his Karma, Thor can open dimensional rifts to other dimensions. Anyone within the area of the rift when it forms is forced into it by Shift Z energy forces. Thor can determine which dimension he accesses.
- *Flight:* Thor can move at up to Amazing air speeds (25 areas/round).
- *Life Force Drain:* The hammer can drain life forces and can thus kill immortals. This drains all of Thor's Karma and all Health except for 10 points.
- *Light Emission:* Mjolnir can emit Incredible intensity flashes of light
- *Lightning Bolts:* Thor can project Monstrous intensity lightning bolts.
- *Magic Detection:* Thor can sense Asgardian magic with Good ability.
- *Power Absorption/Reflection:* Mjolnir can absorb energy and psionic attacks of up to Class 1000 intensity, but must release the energy by the next round. Energy can be reflected back to its source with an Excellent Agility FEAT roll.
- *Weather Control:* Thor has Unearthly control over the weather.
- *Worthiness:* Mjolnir can only be wielded by a pure and noble person of Excellent Strength or greater.

**TALENTS:** Marksman, Weapons Specialist (Mjolnir) (both); Asgardian Lore, Multi-lingual (Ancient and Dead Languages), and Swordsmanship (+1CS) (Thor I); Architecture and Engineering (Thor II).

### KNOWN POWERS

*Body Armor:* Tiger Shark's body can withstand deep-sea pressures and this provides him with Excellent protection vs. physical attacks.

*Resistance to Cold:* He is immune to the effects of up to Excellent rank cold.

*Swimming:* Tiger Shark has Good rank speed swimming on or under water (four areas/round).

*Teeth:* His razor-teeth are made of Excellent materials and Tiger Shark can bite grappled opponents for Excellent Edged damage.

*Water Breathing:* Tiger Shark has mutagenically created gills that allow him to breathe both water and air.

### EQUIPMENT

*Hydro-Suit:* His Good material strength suit does not provide extra physical protection, but it does contain a reservoir of water and a filtration system. This allows him to operate as well on land as in the sea. Without exposure to water, Tiger Shark's abilities would decline to normal human levels (except for Strength and Endurance of Good).

**TALENTS:** Olympic Swimming and Underwater Combat.

*Alter Ego:* Greer can change between her human form and her Tigra form by using a mystic amulet of the Cat People that she wears on her top. As Tigra, she gains the following powers:

- *Claws:* Tigra's Good strength hand and foot claws inflict Good Edged damage, though she can retract them when using her normal Blunt attacks.
- *Climbing:* Tigra can climb vertical surfaces at her normal land speed.
- *Enhanced Abilities:* As Tigra, Greer's Excellent Agility, Strength, Endurance, and Intuition are all boosted to the levels listed above.
- *Enhanced Senses:* Tiara's sight, sense of smell, and hearing operate at Monstrous levels. She suffers a -1CS on FEAT rolls against attacks on these senses. She can track targets with Amazing ability.
- *Lightning Speed:* Tigra can run at four areas/round (Good rank). She can run with Monstrous Endurance.
- *Night Vision:* At Incredible rank, Tigra can perceive objects in almost total darkness, and suffers no penalties when fighting in the dark.
- *Empathy:* From her original training as the Cat, Greer gained the Excellent ability to detect emotions. She can also communicate on animal levels with felines of all types at Incredible levels (such as roaring to induce fear or purring for calm).

### KNOWN POWERS

*Robot Body:* Ultron-13's new body is less streamlined than previous models, favoring articulated metallic musculature, though it is no less impervious than the other Ultrons.

- Body Armor:* Ultron's Adamantium covering gives him Class 1000 protection against physical and energy attacks. At his joints, however, he has only Shift X protection.
- Invulnerability:* Ultron is immune to cold, corrosives, heat, and radiation.
- Molecular Rearranger:* This device in Ultron's chest allows him to alter his form with Monstrous ability.

*Weapon Systems:* Ultron has weapons integrated into his robotic form:

- Concussion Blasters:* These hand-blasters cause Monstrous force damage in a four-area range.
- Encephalo-Beams:* Ultron's head can emit an electronic pulse that gives him the equivalent of Incredible Mind Control powers. This power can be focused into a beam of Incredible psionic force with an 11-area range.
- Induction:* Ultron can absorb up to Unearthly rank external energies. He can use this energy to restore Health.
- Life Force Transfer:* Ultron can absorb "life force" from any andrones (see below), using this energy to restore his Health.
- Laser Beams:* Ultron can fire Incredible intensity lasers from his eyes to a range of six areas.
- Tractor Beams:* These hand-beams can exert up to Remarkable strength pulling power up to eight areas away.

### EQUIPMENT

*Androne Robotization Crystals:* Ultron uses a unique crystal (in gas form) to generate human-androne slaves. Once ingested by living creatures, the crystals change organs and tissues into metal and computer chips, and make the "andrones" subject to Ultron's Monstrous rank Mind Control (with a Class 1000 range). Tissues become partially metallic, granting an Excellent rank Body Armor. Effects can be resisted with green or better Endurance FEAT rolls with each exposure to the gas, but are only curable by exposure to high concentrations of infrared light (Endurance FEAT rolls at +1CS).

**TALENTS:** Engineering and Repair/Tinkering.

- **Invulnerability:** Vision is immune to the effects of aging, disease, and toxins.
- **Life Support:** Vision has no need for food, water, or air.
- **Solar Beams:** He can fire Remarkable heat beams from his eyes or forehead jewel to a range of eight areas.
- **Solar Regeneration:** In sunlight, Vision regenerates at Amazing rank. He can regain Health points equal to the intensity of solar or laser energy directed at his jewel, up to a maximum 50 points per round.

**Density Manipulation—Self:** Vision's Unearthly control over his density gives him a wide range of abilities:

- **Body Armor:** At densities above Good (maximum of Unearthly), Vision has Body Armor equal to his density rank. At Incredible or greater, he is -1CS to Fighting and Agility, but uses his density rank as Strength.
- **Disruption:** Vision can disrupt living and nonliving material by inserting his phased hand into a target. Damage inflicted is equal to his density, ignoring any Body Armor.
- **Flight:** At Shift 0 density, Vision flies at Poor air speed (four areas/round).
- **Phasing:** He can phase through objects at Shift 0 density.

**TALENTS:** Photographic Memory and Repair/Tinkering.

### KNOWN POWERS

*Ionic Energy Body:* Simon's body is composed entirely of ionic energy in a solid form. Because of recent changes, Simon can tap his ionic energy for a wider variety of powers. Right now, he maintains these listed powers, though more may emerge in the future:

- *Body Armor:* Wonder Man's skin provides Amazing protection from all attacks except psionics.
- *Invulnerability:* Simon is immune to the effects of cold and heat.
- *Life Support:* Wonder Man does not need air, food, or water to survive, and he can survive in a vacuum with no ill effects.

### NOTE

Simon's ionic energy body has recently been adapting to a massive influx of radiation from the Negative Zone. These energies have disrupted his normal control over his ionic energies. To maintain his current statistics and abilities, Simon must remain angry. If he begins to doubt his abilities or himself, his Strength, Endurance, and powers drop by -3CS per round.

### EQUIPMENT

*Jet Packs:* These jet packs tap his ionic energy and provide Good air speed (eight areas/round).

**TALENTS:** Business, Engineering, and Performing (Acting, Stuntwork).

- *Flight:* She can fly at Good air speeds (eight areas/round) by means of her artificial wings and the anti-gravity devices in the suit.
- *Insect Communication:* The original cybernetic helmet stolen by Rita could communicate and command insects with Typical ability and range. Whether she still has this ability is unknown, since she rebuilt the helmet.
- *Protected Vision:* Yellowjacket's helmet provides her Excellent protection against light-based attacks.
- *Size Manipulation—Shrinking:* Yellowjacket can shrink with Incredible ability with the aid of her helmet, reducing her to a 1/2-inch height.

**TALENTS:** Electronics, Engineering, and Repair/Tinkering.

## HOME FOR THE HEROES

Well, now that your player characters are part of the illustrious Avengers, they have need of a headquarters! As Avengers, your characters now have funding from the Maria Stark Foundation, a trust fund of Incredible rank resources. This fund, independent of other Stark holdings, provides the resources needed to keep the Avengers and their equipment functioning. With the establishment of a new branch team within the Judge's game campaign universe, it is time to have the team's official Avengers branch headquarters. For new player characters, or those without a base, read *Location is Everything* and begin piecing together the next Avengers HQ! While doing so, players create the map of the base, since they, not the Judge, are outfitting it to their characters' needs.

If a base has already been established within the Judge's campaign that suits the location limitations within the By-Laws, it can be upgraded to have more compatibility with the Avengers' systems. Internal upgrades tend to be in the areas of computers (information processing and retrieval), communication systems, and laboratories. External upgrades concern security systems and reinforcement of the pre-existing structures.

### **Location is Everything!**

When establishing a base for superheroes, it is required that a headquarters must be a meeting place accessible by other heroes and (to a limited extent) the public, and it must provide a solid defense against the various foes of the heroes. These things are immediately contingent on the location and function of the base.

The building itself, as the initial consideration for a headquarters, must be large enough to contain all the necessary Avengers equipment as well as rooms for living quarters, if so desired. The building should also be defensible against intruders. An Amazing rank security system will protect your HQ, but a good isolated location (like the Avengers West Compound) allows for easy defense with less cost.

### **Building**

While many independent heroes operate from their homes (like Daredevil and the Fantastic Four), most heroes and hero groups work out of a separate headquarters. The first thing to consider is the building itself, its size, and its structural strength. The Stark Foundation provides for the financing and purchase of a building, the surrounding grounds, and the

minimum monitoring equipment demanded by the UNSC. The rest of the headquarters needs to be financed by the heroes themselves for their initial probationary period. Table C (page 64) shows the basic structures that a team of four to eight heroes could use as a headquarters, assuming the basics of space for living quarters and equipment and storage.

### **Under Construction**

No matter how you find your prospective headquarters, unless you've appropriated an abandoned alien base or the home of your arch-enemy, your team of heroes will have to modify it for their needs.

Modifications tend to involve strengthening the structure to withstand the rigors of constant superhuman traffic, updating and enhancing existing communications and security setups and custom-fitting living quarters to the needs and wants of individual heroes. Table D (page 64) and its notes explain the major outfitting changes that are needed to make any building a superheroes' headquarters. The UNSC will allow the new Avengers to utilize any stockpiled equipment salvaged from the sunken Avengers island at a lower price. If the Judge chooses to allow any equipment on Table D to be among this salvage, reduce the Resource cost by one rank, and keep in mind that some of this may be in need of repair.

### **Support Your Local Avengers**

Last, but not least, the Avengers have come to understand a need for support staff to aid them in the smooth operation of their facilities as well as maintaining inter-team communications, the repairing of team equipment, and the like. Table E (page 64) provides example support staff that can be hired for various functions within the team headquarters.

Warehouse, Large	Amazing	Deluxe	Good

1. Building costs vary by location. If searching within a major metropolis such as Chicago or London, raise the cost by +1CS. Respectively, a place somewhat more remote or secluded, such as Lake Geneva, an island, or a similar suburb of a large city, reduces the cost of buying the building by -1CS.

2. The smallest HQ for four heroes and some equipment (with no room for living quarters) is Medium. Large buildings provide room for up to six heroes, equipment, a staff of two, and living quarters. Deluxe accommodations are the largest and provide space for up to nine heroes, a support staff of up to 12 people, living quarters for all, storage for vehicles, and various extras such as trophy rooms or Danger Rooms.

3. Material lists the pre-existing strength of the walls and floors. Floors support weights equal to their material strength +2CS indefinitely and greater weights under temporary stress (foot traffic, loading bays, etc.).

1. Danger Room: Danger Rooms are programmable computerized gymnasiums (Incredible rank min) with advanced equipment designed to test heroes under simulated combat conditions. The room itself can have recessed tests, and it can also build robots and other constructs as per desired simulation. Automated threats have maximum Strengths and intensities equal to the Resource cost. Holographic illusions can be incorporated into them at an effectiveness of -2CS Resources. The Danger Room of the X-Men has incorporated alien technology and is considered unique. The Avengers East Coast team has an Amazing rank Danger Room set up with an Excellent self-repair ability and voice-programming systems (Monstrous rank/Resource cost) while the West Coast team simply uses their lawn in sparring matches. Existing gymnasium areas can be adapted and upgraded to a Danger Room status of equal rank with a Remarkable Resource expenditure.
